UTFT Fonts

Instructions

Click on the image to see a full-size version of the font. Click on the download-icon () next to the font name to download it.

Fonts submitted by users are marked with the **Submission** icon. I have not tested these fonts so there *may* be bugs that I am not aware of. I am also not responible for any copyright infringements incurred by these fonts.

The fonts have been divided into four categories.

- **Default fonts** are the fonts that are supplied with the libraries, but are provided here in case you manage to screw them up somehow.
- Full fonts are fonts that contain all 95 characters that are considered to be the ASCII printable characters.
- Numeric fonts are fonts that only contain the numbers from 0 to 9.
- Subset fonts are usually speciality fonts that contain a certain subset of the ASCII printable characters.

To use the font you simply copy the downloaded file to your sketch folder. The name of the font array is the same as the font name. You will have to reload your sketch if it is already open.

Multiple fonts can be combined to a single file after you have downloaded them.

Your font-files *can* also be placed in the library folder, but I would highly recommend that you keep it in your sketch folder.

How to submit fonts

If you have a font you would like me to add to this page you can submit it through my $\underline{\text{contact page}}$. I will need

- (1) the .c file for the font,
- (2) a short description (1 or 2 sentences, preferably short),
- (3) the name you want the font to be credited to (nicknames are OK), and
- (4) any additional notes you want to add (if any). Please keep the notes short.

Font license:

All fonts on this page are considered Public Domain . This means that you are free to use them as you see fit in any project, commercial or not.

Commercial projects will still need a commercial license for any libraries used.

Default fonts

BigFont

Font type: Full font (95 chars) Font size: 16x16 pixels

Default Large font.
